## Reasons for Allowance

Claims 1-20 are allowable over the prior art of record.

The following is an examiner's statement of reasons for allowance:

As per claims 1,11, and 20, the prior art of record does not specifically teach the remote clusters containing a plurality of remote cluster processors, in light of the remaining limitations of the method (claim 1), processing cluster (claim 11), and cache coherence controller (claim 20) of the claims. Claims 2-10 and 12-19 are allowable as being dependent upon an allowable base claim.

Jhang et al. (U.S. Patent No. 6,253,292) teaches a remote data cache 417 that contains state and data information cached locally from other remote nodes but does not specifically teach or suggest a point-to-point architecture as defined by Applicant (a direct connection between the processors - page 5, lines 22-24, of Applicant's specification as originally filed) between the processors of a given node (figure 11) nor providing a response indication with a completion indicator to a requesting processor when a request can be completed locally.

Raghavan (U.S. Patent Application Publication No. 2004/0117554) teaches (figure 1) processors 160 of a node connected by a bus system 130, not directly connected in a point-to-point architecture as defined as above, and a system memory 150, that may be accessed as a remote data cache to complete a request locally, without having to access the remote node 120, but does not specifically teach or suggest a completion indication to be used when a request can be completed locally.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
